

Q. Create a react app called **ReactName** with the following components :

1. **App**
2. **Registration**
3. **RegistrationForm**

Your app must collect the registration information from **RegistrationForm** component and send it to the **App.js** component through **Registration** component. Then the registration data must be shown on the console from the **App.js** component. Kindly refer to below Figure for more

illustration of the app. (Note:your app must use `useState` hook for this app)
